NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 2_COD_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
char item;
  struct Node* next;
  struct Node* prev;
}:
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
 struct Node*newnode=(struct Node*)malloc(sizeof(struct Node));
 newnode->next=NULL:
 newnode->prev=NULL;
  newnode->item=item;
 struct Node*position=*head;
 if(*head==NULL){
   *head=newnode;
   return;
```

```
while(position->next!=NULL){
  position=position->next;}
  newnode->prev=position;
  position->next=newnode;
}
void displayForward(struct Node* head) {
  while(head!=NULL){
    printf("%c",head->item);
    head=head->next:
  }
}
void displayBackward(struct Node* tail) {
  while(tail!=NULL){
    printf("%c",tail->item);
    tail=tail->prev;
  }
}
void freePlaylist(struct Node* head) {
  struct Node*position=head->next;
  while(position->next!=NULL){
    struct Node*temp=position;
    position=position->next;
   free(temp);
int main() {
  struct Node* playlist = NULL;
  char item;
  while (1) {
    scanf(" %c", &item);
    if (item == '-') {
      break;
    insertAtEnd(&playlist, item);
  struct Node* tail = playlist;
```

```
while (tail->next != NULL) {
    tail = tail->next;
}

printf("Forward Playlist: ");
displayForward(playlist);

printf("Backward Playlist: ");
displayBackward(tail);

freePlaylist(playlist);

return 0;
}

Status: Correct

Marks: 10/10
```
